Subject: Front Entry Lights

Hi Don.

I am curious why it is that we still use incandescent lights at our front entrance and elsewhere within our community. Do I need special approval to purchase halogen lights to replace the existing non-operable incandescent bulbs?

And, the sign light was positioned against the ground and was apparently shorted out by the vast amounts of water in recent months. Do we have an electrical layout of the existing system? If not, I will be calling an electrician to repair the front sign lighting.

Thanks,
Gil
